废钢尾料预分选系统方案 AUTO SHREDDER RESIDUAL PRE-SORTING SOLUTION

滚筒筛

方案目的 PROGRAM OBJECTIVES

针对目前物料比较潮湿，同时需要对小颗粒进行筛分，我们采用了滚筒筛和弛张筛的组合模式，先将大颗粒进行分离，然后，小颗粒进入到弛张筛，利用弛张筛的筛分效率高及有效的筛网防堵特性，将小颗粒进行有效的筛分；筛分完之后的物料再进入到空气分选系统，分离出轻物质，分离出来的物料再进入到金属分选系统，可有效的提高金属分选系统的分选效率，该预分选系统有离线分选和在线分选两种选择。

弛张筛

Based on the current material is damper, at the same time need to screening of small particles, we adopt the combination pattern of roller screen and relaxation sieve, large particle separation first, then the small particles into the relaxation sieve, using the relaxation sieve high screening efficiency, screen mesh and effective prevent features, will be small particles for effective screening, screening after the material again into the air separation system, separation of the light material, the separated material into metal separation system, which can effectively improve the separation efficiency of metal separation system, the preassigned have offline and online sorting separation system of two options.
